

What breed is my dog? How big will he be?

Gast Animal Hospital can help!

A ROYAL CANIN® Genetic Health Analysis™ will:

Determine the breeds that make up your dog, comparing your dog's DNA to the unique genetic signatures of more than 250 breeds, types and varieties of dogs.

Screen your dog for genetic mutations that can predict specific health conditions. We currently test for 13 different mutations, with more added regularly.

Predict your dog's likely adult weight and size, providing a benchmark you can use to ensure your dog stays at a healthy weight.

Offer precise nutritional guidelines and feeding recommendations based on your dog's breed make-up.

Call today for an appointment. Ask us about special pricing in August! (219) 759-7387
